DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1 and 2, drawn to an immunoglobulin light chain binding partner, classified in class 530, subclass 387.1.
- II. Claim 3, drawn to a solid support that attaches an antibody, classified in class 436, subclass 501.
- III. Claims 5 and 6, drawn to a polynucleotide encoding a light chain, classified in class 536, subclass 23.53.
- IV. Claim 7, drawn to a process of preparing a light chain by cultivating a cell with an expression vector, classified in class 435, subclass 326.
- V. Claims 8 and 9, drawn to a method of isolating an immunoglobulin, classified in class 435, subclass 7.92.

The inventions are distinct, each from the other because of the following reasons:

Inventions I-III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the immunoglobulin light chain and the polynucleotide are composed of completely different structural components. The polynucleotide comprises nucleic acids, which expresses genes and the immunoglobulin comprises amino acid residues and is capable of binding to other proteins. The immunoglobulin does not require the polynucleotide or vice versa because each molecule

can be made synthetically. The product of group II does not relate to either group I or III because it does not possess the structural or functional characteristics of group I or group III.

Inventions I and IV, V are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the immunoglobulin light chain can be made synthetically and can be isolated by another process, i.e. the process of group V.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and a divergent subject matter. A search for one group does not include a search for another. Therefore, a restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
